

EduMeet.Ai -- CS201: Graph Algorithms & Traversals

Instructor: Prof. Sarah Jenkins

1. Breadth-First Search (BFS):

- Uses a Queue data structure (FIFO)
- Finds shortest path in unweighted graphs: Time $O(V + E)$

2. Depth-First Search (DFS):

- Uses a Stack or Recursion (LIFO)
- Used for topological sorting and connected components: Time $O(V + E)$
